

SQL Select

What is select?

select is used to retrieve/display data from a table.

syntax:

```
SELECT column_name  
FROM table_name;
```

Example: emp_details table

```
/*Select one column*/
```

```
SELECT name  
FROM emp_details;
```

```
/*Select multiple columns*/
```

```
SELECT name, age  
FROM emp_details;
```

```
/*Select all columns*/
```

```
SELECT *  
FROM emp_details;
```

```
/*Column order matters*/
```

```
SELECT salary, name  
FROM emp_details;
```

***Important

Select doesn't change your original data it
only asks show me this information.
